

## TYPICAL SECTION

### NOTES:

1. Control joints with tooled edges shall be cut 1/4 to 1/3 of the section depth at 10 foot intervals. Curb joints shall match street joints when adjacent to concrete street pavement. Curb joints shall match adjacent sidewalk joints.
2. Through joints and full form plates shall not be used except where specifically approved by the engineer.
3. All exposed corners shall be finished to a 1/2 inch minimum radius.
4. Do not use expansion joints
5. Construction stakes shall establish face of curb for horizontal control and pavement grade for vertical control.
6. Standing curb shall be used only where the existing curb is predominantly standing curb and with the Engineer's approval.
